New Eco Homes Manel Gutierrez, 2015-11-10 A stunning, full-color showcase of the latest innovations in sustainable architecture and eco-friendly design, featuring thirty-five diverse homes. Today's architects, designers, building craftsman, and homeowners are becoming more environmentally conscious, choosing eco-friendly living spaces with small carbon footprints that are built with sustainable materials. *New Eco Homes* explores various aspects of modern eco design, from its environmental and economical benefits, to factors considered when choosing materials: how much energy went into manufacturing the product, whether it is long lasting, and whether it can be recycled or safely disposed of as it eventually breaks down. It also examines important details involved in building, such as climate regulation, drainage systems, and regional planning. Each of the thirty-five projects contain photographs, floor plans, and detailed drawings that illustrate certain sustainable features, revealing how much the parameters of ecological design have expanded in just a few short years. *New Eco Homes* includes an introductory interview with an international specialist in green building, site plans, architectural drawings, and a complete directory of resources. Combining concern for the environmental with aesthetic sensibility, it is an essential resource for architects, designers, and homeowners interested in creating warm and inviting homes that are not only beautiful to inhabit, but help protect and conserve our natural environment as well.

1000 New Eco Designs and Where to Find Them Rebecca Proctor, 2009-06-10 As we become only too aware of the damage man has caused to the planet, more of us want to furnish and decorate our homes with products that do not harm the environment. But being sensitive to the environment does not mean you have to sacrifice good design. More and more designers are creating products that are both beautiful and ethical. *1000 New Eco Designs* is a showcase of contemporary product design and interior products that are ecologically sound. Informative and visually inspirational, the book acts as a handbook, guiding readers through the complex issues involved in creating and choosing eco-friendly designs for the home. A series of icons show each product's green credentials; highlighting the use of recycled, sustainable, and locally-sourced materials as well as non-toxic, low-energy, and low-waste manufacturing processes, so that readers can see at a glance the individual characteristics of each design. The book also provides full information on where to source and buy the products featured.

Eco-man Mark Christopher Allister, 2004 Many canonical literary works look to the wild as the site for establishing a

man's selfhood. But nature is just as often subjected to his most violent displays of mastery. This tension lies at the heart of 'Eco-Man', which brings together two rapidly growing fields: men's studies and ecocriticism.

Eco-Visionaries Pedro Gadanho, 2018-05-30 Eco-Visionaries surveys contemporary positions in art and architecture addressing environmental problems beyond mainstream notions of sustainability. This comprehensive volume is a companion to the collaborative 2018 exhibition staged by four participating European museums. Each show maintains a different focus and curatorial approach, and for each, artists investigate more sustainable approaches toward humankind's place on earth, through video and sound works, paintings and installations. While the series of exhibitions presents the works of artists and architects who offer critical reflections on pressing contemporary issues, the book unites research, essays and the artworks. Besides the historical antecedents of current ecological thinking in art and design, this catalog also promotes alternative visions for future uses of energy, resources and the environment.

The Eco-Home Design Guide Christopher Day, 2015-10-29 The key principles of designing a pleasant, comfortable and healthy eco-home, with a foreword written by HRH The Prince of Wales, now King Charles III. Designing an eco-home is much more about working with your house's location and situation than relying on intrusive technology and hi-tech materials. With the soaring energy bills and the climate crisis, it is now more important than ever to invest in a home that is considerate of keeping heat in. In this handbook, architect Christopher Day draws on his extensive experience to explain the key principles of eco-home design, using common-sense methods. Packed full of practical information, it includes several case studies of eco-homes, reviewing (with hindsight) what worked well and what could have been better. There is also guidance on how to generate energy, upgrading old buildings, and site planning. With beautifully hand-drawn illustrations, Christopher explores how to use local topography, combined with landscaping, to improve your home's microclimate and keep your house dry and warm in the winter, and cool in the summer. There are also handy tips on how to minimise hidden environmental impacts, and ideas on ways to make your home a safe and healthy place, both emotionally and physically. The Eco-Home Design Guide is essential for anyone who wants to create a attractive, environmentally friendly home that is in harmony with its location.

Eco-Economy Lester R. Brown, 2013-10-31 In 1543, Polish astronomer Nicolaus Copernicus challenged the view that the sun revolved around the earth, arguing instead that the earth revolved around the sun. His paper led to a revolution in thinking. In Lester Brown's brilliant and invigorating account of the industrial economy, he shows how a rethink of its fossil fuel-based, throwaway ethos is necessary to ensure that it works with, not against, the natural environment. The issue now is whether the environment is part of the economy or the economy is part of the environment. Brown argues the latter, pointing out that treating the environment as part of the economy has produced an economy that is destroying its natural support systems. One of the foremost experts on the new economic opportunities, Brown shows the vast economic potential and environmental gains that exist from eliminating the waste and destruction of current consumption. He describes how the global economy can be restructured to make it compatible with the earth's ecosystem so that economic progress can continue, with high standards of living and secure employment for all, while conserving resources and restoring the environment. In the new economy, wind farms replace coal mines, hydrogen-powered fuel cells replace internal combustion engines, and cities are designed for people, not cars. Eco-Economy is a map of how to get from here to there. It is an essential guide to the economy of the 21st century and will be compelling reading for business readers and environmentalists alike looking for ways to build a better future.

The New Eco-Architecture: Alternatives from the Modern Movement Colin Porteous, 2013-10-11 The New Eco-Architecture builds a historical bridge between architectural science and design. It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty-first century environmental needs and priorities. The attitudes and influences of renowned figures are re-examined in relation to current issues of architectural sustainability. By setting today's green architectural quest within a twentieth century context, and evaluating the main protagonists with regard to a modern eco-sensitive lineage, the book will be of primary interest to architectural students, academics and practitioners. However, it should also intrigue historians, theoreticians and critics, who tend to gloss over such issues, as well as other disciplines engaged with the built environment.

New Developments in Eco-Innovation Research Jens Horbach, Christiane Reif, 2018-09-28 Eco-innovations are crucial for reducing the environmental damages arising from economic activities, and are one of the main drivers of a successful transition towards sustainable development and remedying essential climate change problems. This book provides an overview of recent advances in the rapidly growing field of eco-innovation research, adopts an interdisciplinary perspective

and outlines the main future developmental trends. A broad range of topics are addressed, including a bibliometric analysis of eco-innovation research, the relationship between eco-innovation and corporate sustainability, eco-innovation system analysis, new evidence on the economic effects of eco-innovation, and the relevance of policy and policy mixes for eco-innovation activities. The book is dedicated to Klaus Rennings, one of the most important representatives of this field, who unexpectedly passed away in September 2015.

The General Theory of Eco-Social Science Jianfang Jin, 2014 The General Theory of Eco-Social Science has made fundamental changes to Social Science; it introduces five new theories to the field of humanities and social science. ECO-ENTITY--An Entirely New Sociology It lays out an all new system of ecological theory integrating the social and natural sciences. At its core is the new concept of the eco-entity, its roles and inner systems, its rules, operation laws and operating mechanism. ECO-RESOURCES--New Philosophy and Management It advances the concept of eco-resources, expanding to the social relations of human beings, and puts forth the new theories of the monist world outlook of eco-resources, the dichotomy between positive and negative eco-resources, and the strategic management of eco-resources, through which it reveals a new dimension to humanities and social sciences. ECOLOGICAL SOCIETY--A Brand New Political Science It introduces the doctrine of an ecological society where the rule of law is replaced by the rule of organicism, and explains the operating principles and governance of the future ecological society. ECO-ECONOMICS--A New Economics It demonstrates with flow charts the economic growth cycle. It depicts the laws of commodity value and eco-value. It stresses the organic inter-relations between the government and the market. The author systematically expounded the economic growth cycle, the starting point, the methods, the principles, the mechanisms and the formulas, in his eco-economy growth theory. ECO - CURRENCY--A Complete New Theory of Currency It creates the new theory of Eco-currency, three basic attributes of currency and three major functions of currency. The author proposes a new eco-monetary policy: management of role currencies, or a visible hand in adjusting the economy. In addition, he also illustrates the elements of eco-currency, a new currency, in detail.

Eco-Justice--The Unfinished Journey William E. Gibson, 2012-02-01 Articles linking ecological sustainability and social justice.

Eco and Low-Carbon New Towns in China Yang Fu, Xiaoling Zhang, 2020-12-30 This book examines the sustainability transition theory in the context of urbanization in China, tracing the development of eco and low-carbon cities. It examines how ideas on building eco-cities and low-carbon cities travel from nation to nation, how they are adopted in the Chinese administrative context and what role inter-scalar actors play in getting the ideas transferred, translated and operationalized on the ground. Offering an overarching theoretical framework that incorporates all urban sustainability experiments in China, the book conducts a comprehensive analysis of the master plans of these new towns and summarizes the normative

transition targets of sustainable urban experiments. It explores how they differ from each other and how they influence transition dynamics in practice. By examining four eco and low-carbon new towns deemed representative of current major approaches to sustainability transition management in China, the book provides a detailed depiction of generic transition management and explains the different transitional trajectories for each type of sustainable urban experiment. It demonstrates how subnational-level and city-level transitions mediate the national transition. Through a thorough inquiry into inter-scalar dynamics, institutional arrangements and techno-social innovations in sustainable urban experiments, the book links generalized transition rules and specific contexts to present a full view of the challenges, failures and territorial problems of eco and low-carbon new towns. This book makes a novel contribution to the study of Chinese urbanization by revisiting issues and problems of contemporary urban China. The reflection on these urban issues will provide implications to policymakers, professionals and the common reader interested in the future sustainable urbanism in China.

Eco-Towers K. Al-Kodmany, 2015-05-05 Eco-Towers introduces readers to groundbreaking designs, most progressive projects, and innovative ways of thinking about a new generation of green skyscrapers that could provide solutions to crises the world faces today including climate change, depleting resources, deteriorating ecology, population increase, decreasing food supply, urban heat island effect, pollution, deforestation, and more. The book suggests that the eco-tower culminates the cultural and technological evolutions of the 21st century by building and improving on the experiences of earlier designs of skyscrapers and philosophies particularly green, sustainable, and ecological. It argues that the true green skyscraper is the one that engages successfully with its larger urban context by establishing symbiotic relationships with the social, economic, and environmental aspects. Since tall buildings are becoming larger and taller, serving greater number of people, and exerting higher demand on the environment and existing infrastructure, any improvements in their design and construction will significantly enhance urban conditions. The book elucidates how green skyscrapers better serve tenants, mitigate environmental impacts, and improve integration with the city infrastructure. It explains how skyscrapers' long life cycle offers the greatest justifications for recycling precious resources, and makes it a worthwhile to employ green features in constructing new skyscrapers and retrofitting existing ones. Subsequently, the book explores new designs that are employing cutting-edge green technologies at a grand scale including water-saving technologies, solar panels, helical wind turbines, sunlight-sensing LED lights, rainwater catchment systems, graywater and blackwater recycling systems, seawater-powered air conditioning, and the like. In the future, new building materials and smart technologies will continue to offer innovative design approaches to sustainable tall buildings with new aesthetics, referred to as "eco-iconic" skyscrapers.

Eco-Cultural Networks and the British Empire James Beattie, Edward Melillo, Emily O'Gorman, 2014-12-18 19th-century British imperial expansion dramatically shaped today's globalised world. Imperialism encouraged mass migrations of

people, shifting flora, fauna and commodities around the world and led to a series of radical environmental changes never before experienced in history. *Eco-Cultural Networks and the British Empire* explores how these networks shaped ecosystems, cultures and societies throughout the British Empire and how they were themselves transformed by local and regional conditions. This multi-authored volume begins with a rigorous theoretical analysis of the categories of 'empire' and 'imperialism'. Its chapters, written by leading scholars in the field, draw methodologically from recent studies in environmental history, post-colonial theory and the history of science. Together, these perspectives provide a comprehensive historical understanding of how the British Empire reshaped the globe during the 19th and 20th centuries. This book will be an important addition to the literature on British imperialism and global ecological change.

Eco Barons Edward Humes, 2009-10-06 "Well written and compelling, *Eco Barons* gives the reader a first glimpse of the activists, philanthropists and gadflies who may well turn out to be the J.D. Rockefellers and Rachel Carsons of our time." —Cleveland Plain Dealer Pulitzer Prize-winner Edward Humes offers readers an eye-opening look at the remarkable philanthropists and visionaries who are devoting their lives to saving the earth from overdevelopment and destruction. In *Eco Barons*, Humes, the bestselling author of *Mississippi Mud* and *Monkey Girl*, gives us fascinating portraits of extraordinary men and women who are dedicated to humankind's survival—as important a contribution to the environmental cause as Al Gore's *An Inconvenient Truth*. As the *New York Times* points out, "Humes's urgent message is clear: We must all strive to become 'eco barons' in our own right if we are to save Planet Earth."

Eco-Trauma Cinema Anil Narine, 2014-09-19 Film has taken a powerful position alongside the global environmental movement, from didactic documentaries to the fantasy pleasures of commercial franchises. This book investigates in particular film's complex role in representing ecological traumas. Eco-trauma cinema represents the harm we, as humans, inflict upon our natural surroundings, or the injuries we sustain from nature in its unforgiving iterations. The term encompasses both circumstances because these seemingly distinct instances of ecological harm are often related, and even symbiotic: the traumas we perpetuate in an ecosystem through pollution and unsustainable resource management inevitably return to harm us. Contributors to this volume engage with eco-trauma cinema in its three general forms: accounts of people who are traumatized by the natural world, narratives that represent people or social processes which traumatize the environment or its species, and stories that depict the aftermath of ecological catastrophe. The films they examine represent a central challenge of our age: to overcome our disavowal of environmental crises, to reflect on the unsavoury forces reshaping the planet's ecosystems, and to restructure the mechanisms responsible for the state of the earth.

Eco-Innovation and the Development of Business Models Susana Garrido Azevedo, Marcus Brandenburg, Helena Carvalho, Virgílio Cruz-Machado, 2014-06-06 Environmental challenges such as pollution, climate change, water and natural resources depletion and dwindling bio-diversity are true threats to the survival of our civilization, forcing us to learn how to act now. Fortunately this is exactly what this book does: presenting real life cases, along with theory, methodologies and tools demonstrating how eco-innovation can support sustainable economic growth and save our planet for future generations. Following an introduction describing developments and directions of eco-innovation, Section One discusses Models and Frameworks Supporting Eco-Innovation, with chapters on search strategy for radical eco-innovation; and systematic eco-innovation with TRIZ Methodology. Section Two offers surveys and case studies showing eco-innovation in practice, including a sketch of the eco-innovative landscape in the Brazilian Cellulose, Paper and Paper Products Industry; efforts to eco-innovate among large Swedish companies; progress towards joint product-service business models and more. The third section surveys future directions and emerging trends, among them a new methodology for eco-friendly construction; the development of lightweight small inter-island ferries in Scandinavia and BioTRIZ: a win-win methodology for eco-innovation. The book explores eco-innovation as a framework for supporting the development of new business models which consider the entire business ecosystem, on the way to a sustainable world. Moreover, it explores the eco-innovation process in cross-national and cross-sector perspective.
