**Nordsyn study on air-to-air heat pumps in humid Nordic climate** Stignor, Caroline Haglund,Walfridson, Tommy,2019-05-09 This study was performed for Nordsyn sponsored by Nordic Council of Ministers. The aim was to analyse if the energy labels of air-to-air heat pumps give consumers in Nordic countries sufficient information on energy performance, since declared performance was suspected to be higher than in reality. Due to very few field measurements available, this suspicion could not be confirmed nor rejected. It was found that many heat pumps are declared for lower capacities compared to their intended use in the Nordic countries, to obtain a higher SCOP value on the energy label. Market surveillance tests show that it has become rarer that heat pumps defrost during the laboratory tests. Altogether the study shows that the current energy label does not give clear guidance to the consumer. Recommendations for field measurements as well as suggestions for standard and regulation developments are given.

**Global Climate Change** David E. Kitchen,2016-09-16 The science of climate change is a complex subject that balances the physical record and scientific fact with politics, policy, and ethics - and is of particular importance to the geosciences. This thoughtfully crafted new text and accompanying media encourage non-science majors to practice critical thinking, analysis, and discourse about climate change themes. Taking a cross-disciplinary approach, acclaimed educator and researcher, David Kitchen, examines not only the physical science, but the social, economic, political, energy, and environmental issues surrounding climate change. His goal: to turn knowledge into action, equipping students with the knowledge and critical skills to make informed decisions, separate facts from fiction, and participate in the public debate.

**Living the 1.5 Degree Lifestyle** Lloyd Alter,2021-09-14 Stop thinking about efficiency and start thinking about sufficiency Living the 1.5 Degree Lifestyle reveals the carbon cost of everything we do, identifying where we can make big reductions, while not sweating the small stuff. The international scientific consensus is that we have less than a decade to drastically slash our collective carbon emissions to keep global heating to 1.5 degrees and avert catastrophe. This means that

many of us have to cut our individual carbon footprints by over 80% to 2.5 tonnes per person per year by 2030. But where to start? Drawing on Lloyd Alter's journey to track his daily carbon emissions and live the 1.5 degree lifestyle, coverage includes: What it looks like to live a rich and truly green life From take-out food, to bikes and cars, to your internet usage - finding the big wins, ignoring the trivial, and spotting marketing ploys The invisible embodied carbon baked into everything we own and why electric cars aren't the answer How to start thinking about sufficiency rather than efficiency The roles of individuals versus governments and corporations. Grounded in meticulous research and yet accessible to all, Living the 1.5 Degree Lifestyle is a journey toward a life of quality over quantity, and sufficiency over efficiency, as we race to save our only home from catastrophic heating.

The Climate Nexus Robert William Sandford, Jon O'Riordan, 2015 Published to coincide with the United Nations Climate Change Conference being held in Paris, France, in December 2015, this latest RMB manifesto introduces readers to the serious and converging impacts of climate and weather on water, food and energy and on the biodiversity we cannot do without. Secure supplies of water, food and energy are essential to human dignity and well-being around the globe. In turn, the vitality of these three depends on a thriving biodiversity supported by healthy ecosystems. The complex interdependence among these four factors is known as the Nexus. Global demand for the first three elements is increasing due to population growth and rising per capita incomes in developing countries, with steadily worsening consequences for the fourth of these elements. The four Nexus elements are also coming under increasing pressure from climate disruption: more frequent and severe flooding and storms, droughts, extreme heat, pest outbreaks. What's more, Nature's capacity to moderate these impacts is being steadily eroded by rapid, widespread land-use development and associated pollution. This impending perfect storm of increasing demand, decreasing supplies and rapidly changing hydro-climatic conditions throughout the Nexus requires transformative policy responses that encompass economy, equity, social justice, fairness and the environment. This book outlines these challenges and offers a pathway to resolving them.--

**Sustainable Football** Luca Marrucci, Tiberio Daddi, Fabio Iraldo, 2023-05-10 This book provides a comprehensive, up-to-

date overview of the different environmental strategies adopted in the football world to foster sustainability. The authors lay out useful insights, both for scholars and practitioners, to improve good governance in football organisations by empowering environmental organisational and operational actions. As well as examining practical methods of implementing green initiatives, the book discusses their added value from different perspectives including football fans, football managers and policymakers. By identifying the most important green actions for the dissemination of environmentally friendly behaviours at both individual and organisational levels, the book demonstrates how football organisations can use operational and organisational methods to develop an environmental sustainability strategy. The book contributes to developing the role of the football world by covering different facets of sustainability such as the circular economy, climate change, green marketing, fans engagement and more. It will be a valuable resource for scholars and students of environmental management, sustainable business and corporate social responsibility, as well as professionals working in the football industry.

Students will find in one volume the integration and careful treatment of climate, energy, and sustainability.

**Our Livable World** Marc Schaus, 2020-10-13 A vital guide to the frontlines of our fight against climate change and the scientific and technological innovations that will revolutionize the world. The United States' accelerated plans to combat the existential threat of climate change finally give reason to hope. In *Our Livable World*, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, "smart highways" designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash—and next-generation carbon capture techniques to remove the emissions we have already released over the past several decades. Far from the geoengineering schemes of cli-fi action thrillers, real solutions are being developed, right this moment. *Our Livable World* features interviews with the innovators, real talk on the revolutionary technology, and a clear picture of a cleaner planet in the future. "An important book that shows the dawn of a new kind of environmental movement—an age where we invest in deeply creative and fascinating technical solutions that work in harmony with the Earth. Marc Schaus lays

out the exciting future of environmental innovation before us.” —Katie Patrick, author of *How to Save the World*

**Climate, History and the Modern World** Hubert H. Lamb, 2002-09-26 We live in a world that is increasingly vulnerable to climatic shocks - affecting agriculture and industry, government and international trade, not to mention human health and happiness. Serious anxieties have been aroused by respected scientists warning of dire perils that could result from upsets of the climatic regime. In this internationally acclaimed book, Emeritus Professor Hubert Lamb examines what we know about climate, how the past record of climate can be reconstructed, the causes of climatic variation, and its impact on human affairs now and in the historical and prehistoric past. This 2nd Edition includes a new preface and postscript reviewing the wealth of literature to emerge in recent years, and discusses implications for a deeper understanding of the problems of future climatic fluctuations and forecasting.

**Informing an Effective Response to Climate Change** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, America's Climate Choices: Panel on Informing Effective Decisions and Actions Related to Climate Change, 2011-01-07 Global climate change is one of America's most significant long-term policy challenges. Human activity-especially the use of fossil fuels, industrial processes, livestock production, waste disposal, and land use change-is affecting global average temperatures, snow and ice cover, sea-level, ocean acidity, growing seasons and precipitation patterns, ecosystems, and human health. Climate-related decisions are being carried out by almost every agency of the federal government, as well as many state and local government leaders and agencies, businesses and individual citizens. Decision makers must contend with the availability and quality of information, the efficacy of proposed solutions, the unanticipated consequences resulting from decisions, the challenge of implementing chosen actions, and must consider how to sustain the action over time and respond to new information. *Informing an Effective Response to Climate Change*, a volume in the America's Climate Choices series, describes and assesses different activities, products, strategies, and tools for informing decision makers about climate change and helping them plan and execute effective, integrated responses. It discusses who is making decisions (on the local, state, and national levels), who should be providing information to make decisions, and how that information should be provided. It covers all levels of decision making, including international, state, and individual decision making. While most existing research has focused on the physical aspect of climate change, *Informing an Effective Response to Climate Change* employs theory and case study to describe the efforts undertaken so far, and to guide the development of future decision-making resources. *Informing an Effective Response to Climate Change* offers much-needed guidance to those creating public policy and assists in implementing that policy. The information presented in this book will be invaluable to the research community, especially social scientists studying climate change; practitioners of decision-making assistance, including advocacy organizations, non-profits, and government agencies; and college-level teachers and students.

It offers solutions to make your home, office, car, and vacation more eco-friendly. For example: - Using a dishwasher instead of hand washing will save you 5,000 gallons of water annually. - Eating less beef will save you 250 pounds of CO<sub>2</sub> per year. - Washing your clothes in cold water instead of hot will save 200 pounds of CO<sub>2</sub> annually. - Replacing three of your home's most frequently used lightbulbs with compact fluorescent bulbs will save 300 pounds of CO<sub>2</sub> every year. Including advice on how to properly insulate your house, cancel junk mail, and choose fruits and veggies wisely, Ready, Set, Green will help you change the future of the planet and restore balance to your daily life.

**Advanced Geography** Ralph Stockman Tarr, Frank Morton McMurry, 1909

Introduction to Modern Climate Change Andrew Dessler, 2011-10-10 This textbook is tightly focused on the problem of

anthropogenic climate change. It is unique among textbooks on climate change in that it combines an introduction of the science with an introduction to the non-science issues such as the economic and policy options. Unlike more purely descriptive textbooks, it contains the quantitative depth that is necessary for an adequate understanding of the science of climate change. The goal of the book is for a student to leave the class ready to engage in the public policy debate on this issue. This is an invaluable textbook for any introductory survey course on the science and policy of climate change, for both non-science majors and introductory science students.
