Climate Change and National Security Daniel Moran, 2011-03-22 In this unique and innovative contribution to environmental security, an international team of scholars explore and estimate the intermediate-term security risks that climate change may pose for the United States, its allies and partners, and for regional and global order through the year 2030. In profiles of forty-two key countries and regions, each contributor considers the problems that climate change will pose for existing institutions and practices. By focusing on the conduct of individual states or groups of nations, the results add new precision to our understanding of the way environmental stress may be translated into political, social, economic, and military challenges in the future. Countries and regions covered in the book include China, Vietnam, The Philippines, Indonesia, India, Pakistan, Bangladesh, Central Asia, the European Union, the Persian Gulf, Egypt, Turkey, the Maghreb, West Africa, Southern Africa, the Northern Andes, and Brazil.

Climate Change and Managed Ecosystems Jagtar Bhatti, Rattan Lal, Michael J. Apps, Mick A. Price, 2005-12-20 Featuring contributions from leading experts in the field, Climate Change and Managed Ecosystems examines the effects of global climate change on intensively constructed or reconstructed ecosystems, focusing on land use changes in relation to

forestry, agriculture, and wetlands including peatlands. The book begins by discussing the fragility of ecosystems in the face of changing climates, particularly through human caused increases in atmospheric GHGs. The chapters delineate how and why the climate has changed and what can be expected to occur in the foreseeable future. They identify the potential adaptation responses to reduce the impacts of a changing climate. Using this information as a foundation, the chapter authors examine what is known about the impacts of climate on agricultural, forested, and wetland ecosystems. They illustrate the importance of these ecosystems in the global carbon cycle and discuss the potential interaction between terrestrial and atmospheric carbon pools under changing climactic conditions. The book delineates what needs to be done to ensure continued stability in these ecosystems. It includes a description of activities that have been undertaken in the past to identify gaps in understanding GHG emissions from agriculture, forests, and wetlands and their mitigation, as well as current research initiatives to address these gaps. The book presents an overview of how economic reasoning can be applied to climate change and illustrates how terrestrial carbon-uptake credits (offset credits) operate within the Kyoto Protocol framework. By identifying gaps in the current understanding of adaptation of mitigation strategies, the book underscores the need to make management of these ecosystems part of a global solution.

Climatopolis Matthew E Kahn, 2010-09-07 Climatopolis documents the thinking of a first-rate economist on one of the most pressing issues of our time -- Nature We have released the genie from the bottle: climate change is coming, and there's no stopping it. The question, according to environmental economist Matthew E. Kahn, is not how we're going to avoid a hotter future but how we're going to adapt to it. In Climatopolis, Kahn argues that cities and regions will adapt to rising temperatures over time, slowly transforming our everyday lives as we change our behaviors and our surroundings. Taking the reader on a tour of the world's cities- from New York to Beijing to Mumbai -- Kahn's clear-eyed, engaging, and optimistic message presents a positive yet realistic picture of what our urban future will look like.

Future Forests Steven G. McNulty, 2023-10-27 Future Forests: Adaptation to Climate Change provides background on forests as natural and social systems, the current distribution and dynamics based on major biomes that set the stage for their role of forests in global systems, the nature of climate change organized by biomes, and detailed descriptions of mitigation and adaptation strategies. This book forms presents a foundational summary of the feedback between the effect of climate change on forests and the converse effects of forests on climate, leading to conclusions on how forest management needs to be dictated by climate change. The book will be ideal for readers in the fields of climate change science, forest science and conservation biology, helping them develop a thorough understanding on the broad perspective of climate change on forests, the response of forests to these changes, and other climate-forest interaction potentials. Organizes information on climate change and the effect of/on forests at a general level before presenting biome-related specifics Discusses the differences among major biomes (tropical, boreal, temperate) and the systems in which forest management (and hence potential mitigation and adaptation) occurs Goes beyond simply describing problems, elaborating on potential solutions that can be implemented for climate change mitigation

Sustainable Development Goals for Society Vol. 2 Godwell Nhamo, David Chikodzi, Kaitano Dube, 2021-06-26 This book profiles various cases that are emerging in addressing global challenges in the context of SDGs for society in the era of climate change and covers case studies of projects being undertaken to tackle biodiversity, food security, climate change, energy and water security. The book is written by 37 authors, and will appeal to various stakeholders including academics working within the identified thematic areas, policy planners, development agencies, governments and United Nations agencies. The adoption of the Sustainable Development Goals (SDGs) in 2015 ushered a new era in the global development

agenda as the world transitioned from the Millennium Development Goals (MDGs). The new era of SDGs that are all-inclusive, unlike the MDGs with the focus now being on ensuring human success that is predicated on environmental protection. The year 2020 marked five years post the adoption of the SDGs with increased calls for stock-taking of progress made amid strong calls for a decade of action to accelerate the delivery of the SDGs by 2030. These calls have been louder now given the impact of the COVID-19 pandemic, which reset the global economy and increased intensity of extreme weather events across the world. Since climate change has emerged as one of the biggest threats to the achievement of the SDGs, there has been growing concerns on its impact on biodiversity loss and the extinction of some species. There are also concerns regarding increased food insecurity at the household level in some parts of the world, particularly in Asia and Africa. With the demand for climate change action on the increase, there have also been growing calls for the big carbon emitters to drastically cut their emissions and invest in clean energy to save the planet by following development pathways making emissions stay under the 1.5°C increase in temperature.

212 Service Mac Anderson,2013-01-01 You may know the 212 degree concept for our original bestseller 212 The Extra Degree written by Sam Parker and Mac Anderson. But this book is written specifically for businesses and is all about creating a service culture. In case you are not familiar with the 212 concept, here it is in a nutshell: At 211 degrees water is hot. At 212 degrees, it boils. And with boiling water, comes steam. And steam can power a locomotive. The one extra degree makes the difference. This simple analogy reflects the ultimate definition of excellence. Because it's the one extra degree of effort, in business and life, that can separate the good from the great. The stories in 212 Service reflect real-life examples of companies that have taken their customer service to the next degree. Someone once said, Life is like a game of tennis. The player who serves well seldom loses. The same can be said for any business on the planet. There are many books written about service, however, our goals in this one is to keep it simple. 212 Service presents 10 simple, but engaging rules of service that can be read by every member of your team in less than 30 minutes. 212 Service is written with real life examples of exceptional customer service and is certain to inspire your team with ideas that apply specifically to your industry.

Fracking and the Environment Daniel J. Soeder, 2020-11-11 This book provides a systematic scientific approach to the understanding of hydraulic fracturing (fracking) as a hydrocarbon extraction technology and its impact on the environment. The book addresses research from the past decade to assess how fracking can affect air, water, landscapes and ecosystems, and presents the subject in the context of the history of fracking and shale gas development in the United States, describing what is known and not known about environmental impacts, and the broader implications of fossil energy use, climate change, and technology development. In 9 chapters, the author lays out how and why hydraulic fracturing was developed, what driving forces existed at the beginning of the so-called shale revolution, how success was achieved, and when and why public acceptance of the technology changed. The intended audience is scientific people who are concerned about fracking, but perhaps do not know all that much about it. It is also intended for lay people who would be interested in understanding the technical details of the process and what effects it might or might not be having on the environment. The book is written at a level that is both understandable and technically correct. A further goal is to give some useful insights even to experienced petroleum geologists and engineers who have been doing fracking for many years.

EU Environmental Law and Policy David Langlet, Said Mahmoudi, 2016 Abstracts: An accessible and comprehensive resource, this volume details the structure and logic of EU environmental law and enables readers to quickly gain a thorough understanding of the different areas of EU secondary law pertaining to the protection of the environment.
