**Shock Waves** Stephane Hallegatte, Mook Bangalore, Laura Bonzanigo, Marianne Fay, Tamaro Kane, Ulf Narloch, Julie Rozenberg, David Treguer, Adrien Vogt-Schilb, 2015-11-23 Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

Impacts of Climate Change on Human Health in the United States US Global Change Research Program, 2018-02-06 As global climate change proliferates, so too do the health risks associated with the changing world around us. Called for in the President’s Climate Action Plan and put together by experts from eight different Federal agencies, The Impacts of Climate Change on Human Health: A Scientific Assessment is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration Impacts of extreme events on human health Vector-borne diseases Climate impacts on water-related illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and charts. Learn what health risks face you and your family as a result of global climate change and start preparing now with The Impacts of Climate Change on Human Health.

**Migration, Environment and Climate Change** Frank Laczko, Christine Aghazarm, 2009 Gradual and sudden environmental changes are resulting in substantial human movement and displacement, and the scale of such flows, both internal and cross-border, is expected to rise with unprecedented impacts on lives and livelihoods. Despite the potential

challenge, there has been a lack of strategic thinking about this policy area partly due to a lack of data and empirical research on this topic. Adequately planning for and managing environmentally induced migration will be critical for human security. The papers in this volume were first presented at the Research Workshop on Migration and the Environment: Developing a Global Research Agenda held in Munich, Germany in April 2008. One of the key objectives on the Munich workshop was to address the need for more sound empirical research and identify priority areas of research for policy makers in the field of migration and the environment.

**Renewable Energy Desalination** Bekele Debele Negewo, 2012-09-26 The book looks at water availability and water demand in various sectors till 2050, presenting a methodology to prioritize options both on the demand and on the supply side, with a special focus on renewable energy desalination.

*World Inequality Report 2022* Lucas Chancel, Thomas Piketty, Emmanuel Saez, Gabriel Zucman, 2022-11-01 Produced by a team of world-leading economists, this is the benchmark account of recent and historical trends in inequality. World Inequality Report 2022 is the most authoritative and comprehensive account available of global trends in inequality. Researched, compiled, and written by a team of world-leading economists, the report builds on the pioneering edition of 2018 to provide policy makers and scholars everywhere up-to-date information about an ever broader range of countries and about forms of inequality that researchers have previously ignored or found hard to trace. Over the past decade, inequality has taken center stage in public debate as the wealthiest people in most parts of the world have seen their share of the economy soar relative to that of others. The resulting political and social pressures have posed harsh new challenges for governments and created a pressing demand for reliable data. The World Inequality Lab, housed at the Paris School of Economics and the University of California, Berkeley, has answered this call by coordinating research into the latest trends in the accumulation and distribution of income and wealth on every continent. This new report not only extends the lab's international reach but provides crucial new information about the history of inequality, gender inequality, environmental inequalities, and trends in international tax reform and redistribution. World Inequality Report 2022 will be a key document for anyone concerned about one of the most imperative and contentious subjects in contemporary politics and economics.

**The Cost of Environmental Degradation** Lelia Croitoru, Maria Sarraf, 2010-07-16 How much is a cleaner environment worth? For policy makers, that question used to go largely unanswered. Many economic activities cause environmental degradation, entailing real costs to the economy and to people's welfare. Knowing the extent of these costs is crucial for identifying a country's main environmental priorities and allocating appropriate funds for environmental protection. Over the past decade, the World Bank has initiated a systematic effort to measure the costs of environmental degradation in the Middle East and North Africa, shedding new light on their magnitude and on the need for policy changes. In many cases, these costs were found to be surprisingly large. 'The Cost of Environmental Degradation: Case Studies from the Middle East

and North Africa' brings together the best case studies of this program and summarizes their policy impacts at the national and regional levels. The case studies quantify monetarily the annual damage due to environmental degradation and express these estimates as percentages of the countries' gross domestic product. The studies use the most recent environmental valuation methods to estimate the economic costs resulting from air pollution, water degradation, deforestation, and land degradation. Uniquely, the book dedicates a case study to value the costs of environmental degradation resulting from an oil spill and demolition waste in times of conflict. The studies then illuminate the concrete implications on policy, investments, and institutions for the respective nations. This book will be of interest to policy makers, nongovernmental organizations, and academic and research institutions.

Global Renewables Outlook: Energy Transformation 2050 International Renewable Energy Agency IRENA, 2020-04-01 This outlook highlights climate-safe investment options until 2050, policies for transition and specific regional challenges. It also explores options to eventually cut emissions to zero.

*Climate-smart Agriculture Sourcebook* Food and Agriculture Organization (FAO), 2014 Climate-smart agriculture, forestry and fisheries (CSA), contributes to the achievement of sustainable development goals. It integrates the three dimensions of sustainable development (economic, social and environmental) by jointly addressing food security and climate challenges. It is composed of three main pillars: sustainably increasing agricultural productivity and incomes; adapting and building resilience to climate change; reducing and/or removing greenhouse gases emissions, where possible. The purpose of the sourcebook is to further elaborate the concept of CSA and demonstrate its potential, as well as limitations. It aims to help decision makers at a number of levels (including political administrators and natural resource managers) to understand the different options that are available for planning, policies and investments and the practices that are suitable for making different agricultural sectors, landscapes and food systems more climate-smart. This sourcebook is a reference tool for planners, practitioners and policy makers working in agriculture, forestry and fisheries at national and subnational levels. -- Back cover.

*NATO, Climate Change, and International Security* Tyler H. Lippert, 2019-05-11 This book offers a prospective analysis of the anticipated security consequences of climate change in relation to the North Atlantic Treaty Organization (NATO). Using climate and security literature to complement recent foresight and scenario analysis developed by NATO, the author applies the International Risk Governance Council's (IRGC) Risk Governance Framework to identify the considerations and actions that could assist NATO in a context where climate and environmental factors more intensively shape security. Tyler Lippert explores how climate change has the potential to increase the need for humanitarian assistance and disaster response, to create tension over shared resources, to renew and enhance geo-political interest in the Arctic, and to deepen concern with respect to the Middle East and North Africa (MENA). Within this new political and environmental reality, NATO must

consider how to adapt to meet new demands, prepare for new security challenges, as well as manage unforeseen consequences. Offering a corrective, this book identifies near-term actions for NATO to improve its risk governance posture, providing a basis upon which longer-range policy considerations can be developed. This analysis is only the opening salvo of what is likely to be a complicated process that spans many years, if not decades. However, in mapping the risk governance dimensions to the security and climate nexus from the perspective of NATO, Lippert provides a foundation for risk-based policy planning for NATO. The book will be of immense value to policy and decision makers: NATO leadership and its affiliated organizations as well as to academics across a broad span of subject areas, particularly environmental sociology, defense and foreign policy, and the political sciences.

Unbreakable Stephane Hallegatte,Adrien Vogt-Schilb,Mook Bangalore,Julie Rozenberg,2016-11-24 'Economic losses from natural disasters totaled \$92 billion in 2015.' Such statements, all too commonplace, assess the severity of disasters by no other measure than the damage inflicted on buildings, infrastructure, and agricultural production. But \$1 in losses does not mean the same thing to a rich person that it does to a poor person; the gravity of a \$92 billion loss depends on who experiences it. By focusing on aggregate losses—the traditional approach to disaster risk—we restrict our consideration to how disasters affect those wealthy enough to have assets to lose in the first place, and largely ignore the plight of poor people. This report moves beyond asset and production losses and shifts its attention to how natural disasters affect people's well-being. Disasters are far greater threats to well-being than traditional estimates suggest. This approach provides a more nuanced view of natural disasters than usual reporting, and a perspective that takes fuller account of poor people's vulnerabilities. Poor people suffer only a fraction of economic losses caused by disasters, but they bear the brunt of their consequences. Understanding the disproportionate vulnerability of poor people also makes the case for setting new intervention priorities to lessen the impact of natural disasters on the world's poor, such as expanding financial inclusion, disaster risk and health insurance, social protection and adaptive safety nets, contingent finance and reserve funds, and universal access to early warning systems. Efforts to reduce disaster risk and poverty go hand in hand. Because disasters impoverish so many, disaster risk management is inseparable from poverty reduction policy, and vice versa. As climate change magnifies natural hazards, and because protection infrastructure alone cannot eliminate risk, a more resilient population has never been more critical to breaking the cycle of disaster-induced poverty.

Health of People, Health of Planet and Our Responsibility Wael Al-Delaimy,Veerabhadran Ramanathan,Marcelo Sánchez Sorondo,2020-05-13 This open access book not only describes the challenges of climate disruption, but also presents solutions. The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on climate change has been established through extensive published evidence and

reports. However, the connections between climate change, the health of the planet and the impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem. The solutions and actions we explore in this book engage diverse sectors of civil society, faith leadership, and political leadership, all oriented by ethics, advocacy, and policy with a special focus on poor and vulnerable populations. The book highlights areas we think will resonate broadly with the public, faith leaders, researchers and students across disciplines including the humanities, and policy makers.

**The State of Food Security and Nutrition in the World 2018** Food and Agriculture Organization of the United Nations, 2018-09-14 New evidence this year corroborates the rise in world hunger observed in this report last year, sending a warning that more action is needed if we aspire to end world hunger and malnutrition in all its forms by 2030. Updated estimates show the number of people who suffer from hunger has been growing over the past three years, returning to prevailing levels from almost a decade ago. Although progress continues to be made in reducing child stunting, over 22 percent of children under five years of age are still affected. Other forms of malnutrition are also growing: adult obesity continues to increase in countries irrespective of their income levels, and many countries are coping with multiple forms of malnutrition at the same time - overweight and obesity, as well as anaemia in women, and child stunting and wasting.

*Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation* Christopher B. Field, Vicente Barros, Thomas F. Stocker, Qin Dahe, 2012-05-28 This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

**Crimes Committed by Terrorist Groups** Mark S. Hamm, 2011 This is a print on demand edition of a hard to find publication. Examines terrorists' involvement in a variety of crimes ranging from motor vehicle violations, immigration fraud, and mfg. illegal firearms to counterfeiting, armed bank robbery, and smuggling weapons of mass destruction. There are 3 parts: (1) Compares the criminality of internat. jihad groups with domestic right-wing groups. (2) Six case studies of crimes includes trial transcripts, official reports, previous scholarship, and interviews with law enforce. officials and former terrorists are used to explore skills that made crimes possible; or events and lack of skill that the prevented crimes. Includes brief bio. of the terrorists along with descriptions of their org., strategies, and plots. (3) Analysis of the themes in closing arguments of the transcripts in Part 2. Illus.

Women's Rights in the Middle East and North Africa Sanja Kelly, Julia Breslin, 2010-07-16 Freedom House Os innovative publication Women's Rights in the Middle East and North Africa: Progress Amid Resistance analyzes the status of women in the region, with a special focus on the gains and setbacks for women's rights since the first edition was released in 2005. The study presents a comparative evaluation of conditions for women in 17 countries and one territory: Algeria, Bahrain, Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Palestine (Palestinian Authority and Israeli-Occupied Territories), Qatar, Saudi Arabia, Syria, Tunisia, United Arab Emirates, and Yemen. The publication identifies the causes and consequences of gender inequality in the Middle East, and provides concrete recommendations for national and international policymakers and implementers. Freedom House is an independent nongovernmental organization that supports democratic change, monitors freedom, and advocates for democracy and human rights. The project has been embraced as a resource not only by international players like the United Nations and the World Bank, but also by regional women's rights organizations, individual activists, scholars, and governments worldwide. Women's rights in each country are assessed in five key areas: (1) Nondiscrimination and Access to Justice; (2) Autonomy, Security, and Freedom of the Person; (3) Economic Rights and Equal Opportunity; (4) Political Rights and Civic Voice; and (5) Social and Cultural Rights. The methodology is based on the Universal Declaration of Human Rights, and the study results are presented through a set of numerical scores and analytical narrative reports.

International Trade and Climate Change World Bank, 2007-10-15 Climate change remains a global challenge requiring international collaborative action. Another area where countries have successfully committed to a long-term multilateral resolution is the liberalization of international trade. Integration into the world economy has proven a powerful means for countries to promote economic growth, development, and poverty reduction. The broad objectives of the betterment of current and future human welfare are shared by both global trade and climate regimes. Yet both climate and trade agendas have evolved largely independently through the years, despite their mutually supporting objectives. Since global emission goals and global trade objectives are shared policy objectives of most countries, and nearly all of the World Bank's clients, it

makes sense to consider the two sets of objectives together. This book is one of the first comprehensive attempts to look at the synergies between climate change and trade objectives from economic, legal, and institutional perspectives. It addresses an important policy question - how changes in trade policies and international cooperation on trade policies can help address global environmental spillovers, especially GHG emissions, and what the (potential) effects of (national) environmental policies that are aimed at global environmental problems might be for trade and investment. It explores opportunities for aligning development and energy policies in such a way that they could stimulate production, trade, and investment in cleaner technology options.

The Road Not Traveled Ahmed Galal, 2008 Education is a powerful force that can speed up economic growth, improve income distribution, facilitate social mobility, and reduce poverty. It can also improve the quality of life for citizens by contributing to longer life expectancy, lower fertility and infant mortality rates, and a more cohesive national identity. However, none of these positive outcomes are automatic. All too often, investment in education generates low returns to the individuals involved and society at large. Thus, while investment in education is a necessary condition for faster development and prosperity, it is by no means sufficient. This MENA flagship report explores whether past investments in education in the region have generated their maximum economic returns, and, if not, why they have failed to do so. Ultimately, the answers to these questions are being sought to help policymakers chart more fruitful strategies in the future. -- Overview (p. 1).

Small-scale Aquaponic Food Production Christopher Somerville, Food and Agriculture Organization of the United Nations, 2015 This technical paper begins by introducing the concept of aquaponics, including a brief history of its development and its place within the larger category of soil-less culture and modern agriculture. It discusses the main theoretical concepts of aquaponics, including the nitrogen cycle and the nitrification process, the role of bacteria, and the concept of balancing an aquaponic unit. It then moves on to cover important considerations of water quality parameters, water testing, and water sourcing for aquaponics, as well as methods and theories of unit design, including the three main methods of aquaponic systems: media beds, nutrient film technique, and deep water culture. The publication discusses in detail the three groups of living organisms (bacteria, plants and fish) that make up the aquaponic ecosystem. It also presents management strategies and troubleshooting practices, as well as related topics, specifically highlighting local and sustainable sources of aquaponic inputs. The publication also includes nine appendixes that present other key topics: ideal conditions for common plants grown in aquaponics; chemical and biological controls of common pests and diseases including a compatible planting guide; common fish diseases and related symptoms, causes and remedies; tools to calculate the ammonia produced and biofiltration media required for a certain fish stocking density and amount of fish feed added; production of homemade fish feed; guidelines and considerations for establishing aquaponic units; a cost-benefit analysis of a small-scale, media bed aquaponic unit; a comprehensive guide to building small-scale versions of each of the three aquaponic

methods; and a brief summary of this publication designed as a supplemental handout for outreach, extension and education.
