Dressing Modern Frenchwomen Mary Lynn Stewart,2020-03-03 At a glance, high fashion and feminism seem unlikely partners. Between the First and Second World Wars, however, these forces combined femininity and modernity to create the new, modern French woman. In this engaging study, Mary Lynn Stewart reveals the fashion industry as an integral part of women's transition into modernity. Analyzing what female columnists in fashion magazines and popular women novelists wrote about the new silhouette, Stewart shows how bourgeois women feminized the more severe, masculine images that elite designers promoted to create a hybrid form of modern that both emancipated women and celebrated their femininity. She delves into the intricacies of marketing the new clothes and the new image to middle-class women and examines the nuts and bolts of a changing industry—including textile production, relationships between suppliers and department stores, and privacy and intellectual property issues surrounding ready-to-wear couture designs. *Dressing Modern Frenchwomen* draws from thousands of magazine covers, advertisements, fashion columns, and features to uncover and untangle the fascinating relationships among the fashion industry, the development of modern marketing techniques, and the evolution of the modern woman as active, mobile, and liberated.

Locally Available Energy Sources and Sustainability Antonio Colmenar Santos,David Borge Diez,Enrique Rosales Asensio,2020-06-17 Renewable energy is electricity generated by fuel sources that restore themselves over a short period of

time and do not diminish. Although some renewable energy technologies impact the environment, renewables are considered environmentally preferable to conventional sources and, when replacing fossil fuels, have significant potential to reduce greenhouse gas emissions. This book focuses on the environmental and economic benefits of using renewable energy, which include: (i) generating energy that produces no greenhouse gas emissions from fossil fuels and reduces some types of air pollution, (ii) diversifying energy supply and reducing dependence on imported fuels, and (iii) creating economic development and jobs in manufacturing, installation, and more. Local governments can dramatically reduce their carbon footprint by purchasing or directly generating electricity from clean and renewable sources. The most common renewable power technologies include: solar (photovoltaic (PV), solar thermal), wind, biogas (e.g., landfill gas, wastewater treatment digester gas), geothermal, biomass, low-impact hydroelectricity, and emerging technologies such as wave and tidal power. Local governments can lead by example by generating energy on site, purchasing green power, or purchasing renewable energy. Using a combination of renewable energy options can help to meet local government goals, especially in some regions where availability and quality of renewable resources vary. Options for using renewable energy include: generating renewable energy on site, using a system or device at the location where the power is used (e.g., PV panels on a state building, geothermal heat pumps, biomass-fueled combined heat and power), and purchasing renewable energy from an electric utility through a green pricing or green marketing program, where buyers pay a small premium in exchange for electricity generated locally from green power resources.

The Long, Hot Summer of 1967 M. McLaughlin, 2014-03-20 It seemed at times during the 1960s that America was caught in an unending cycle of violence and disorder. Successive summers from 1964-1968 brought waves of urban unrest, street fighting, looting, and arson to black communities in cities from Florida to Wisconsin, Maryland to California. In some infamous cases like Watts (1965), Newark (1967), and Detroit (1967), the turmoil lasted for days on end and left devastation in its wake: entire city blocks were reduced to burnt-out ruins and scores of people were killed or injured mainly by police officers and National Guardsmen as they battled to regain control. This book takes the pivotal year of 1967 as its focus and sets it in the context of the long, hot summers to provide new insights into the meaning of the riots and their legacy. It offers important new findings based on extensive original archival research, including never-before-seen, formerly embargoed and classified government documents and newly released official audio recordings.

Aleksandr Deineka (1899-1969) Александр Александрович Дейнека, Fundación Juan March, 2011 Aleksandr Deineka (1899-1969): An Avant-Garde for the Proletariat is the first exhibition and publication to present this outstanding figure of socialist realism - and, by extension, the historical period from which his work was borne - in a twofold context: the end of the avant-garde and the advent of Soviet socialist realism. It covers Deineka's entire oeuvre, from his early paintings of the 1920s to the twilight of his career in the 1950s, when the dreamlike quality of his first works gave way to the harsh materiality of everyday life, the life in which the utopian ideals of socialism seemed to materialize. Combining Deineka's graphic work, extraordinary posters and celebrated contributions to illustrated magazines and books with his imposing monumental paintings, this catalogue displays a variety of subjects: factories and enthusiastic masses, athletes and farmers, the ideal and idyllic image of Soviet life.

A History of Contemporary Chinese Art Yan Zhou, 2020-07-14 Chinese art has experienced its most profound metamorphosis since the early 1950s, transforming from humble realism to socialist realism, from revolutionary art to critical realism, then avant-garde movement, and globalized Chinese art. With a hybrid mix of Chinese philosophy, imported but revised Marxist ideology, and western humanities, Chinese artists have created an alternative approach – after a great ideological and aesthetic transition in the 1980s – toward its own contemporaneity though interacting and intertwining with the art of rest of the world. This book will investigate, from the perspective of an activist, critic, and historian who grew up prior to and participated in the great transition, and then researched and taught the subject, the evolution of Chinese art in modern and contemporary times. The volume will be a comprehensive and insightful history of the one of the most sophisticated and unparalleled artistic and cultural phenomena in the modern world.

Security Rights in Movable Property in European Private Law Eva-Maria Kieninger, 2004-08-26 For every transnational lawyer, it is vital to know the differences between national secured transactions laws. Since the applicable law is determined by the place where the collateral is situated, it may change when movables are brought from one state to another. Introductory essays from comparative lawyers set the scene. The book then presents a survey of the law relating to secured transactions in the member states of the European Union. Following the Common Core approach, the national reports are centred around fifteen hypothetical cases dealing with the most important issues of secured transactions law, such as the creation of security rights in different business situations, the relationship between debtor and secured creditor, the nature of the creditor's rights and their enforcement as against third parties. Each case is followed by a comparative summary. A general report evaluates the possibilities of European harmonisation in the field of secured transactions law.
