Ranging from high art to homely, some are associated with known persons, others are anonymous, yet their histories – of recycling, repairing, augmenting – illuminate times when textile was handmade and precious.

As Heard on TV: Popular Music in Advertising Dr Bethany Klein, 2013-01-28 The use of popular music in advertising represents one of the most pervasive mergers of cultural and commercial objectives in the modern age. Steady public response to popular music in television commercials, ranging from the celebratory to the outraged, highlights both unresolved tensions around such partnerships and the need to unpack the complex issues behind everyday media practice. Through an analysis of press coverage and interviews with musicians, music supervisors, advertising creatives, and licensing managers, *As Heard on TV* considers the industrial changes that have provided a foundation for the increased use of popular music in advertising, and explores the critical issues and debates surrounding media alliances that blur cultural ambitions with commercial goals. The practice of licensing popular music for advertising revisits and continues a number of themes in

cultural and media studies, among them the connection between authorship and ownership in popular music, the legitimization of advertising as art, industrial transformations in radio and music, the role of music in branding, and the restructuring of meaning that results from commercial exploitation of popular music. As *Heard on TV* addresses these topics by exploring cases involving artists from the Beatles to the Shins and various dominant corporations of the last half-century. As one example within a wider debate about the role of commerce in the production of culture, the use of popular music in advertising provides an entry point through which a range of practices can be understood and interrogated. This book attends to the relationship between popular culture and corporate power in its complicated variation: at times mutually beneficial and playfully suspicious of constructed boundaries, and at others conceived in strain and symbolic of the triumph of hypercommercialism.

The King Never Smiles Paul M. Handley, 2017 Thailand's Bhumibol Adulyadej, the only king ever born in the United States, came to the throne of his country in 1946 and is now the world's longest-serving monarch. This book tells the unexpected story of his life and 60-year rule -- how a Western-raised boy came to be seen by his people as a living Buddha, and how a king widely seen as beneficent and apolitical could in fact be so deeply political, autocratic, and even brutal. Paul Handley provides an extensively researched, factual account of the king's youth and personal development, ascent to the throne, skillful political maneuverings, and attempt to shape Thailand as a Buddhist kingdom.

Anticipating Criminal Behaviour Peter A. M. G. Kock, Peter de Kock, 2014 In the first decade of this century, the focus of law-enforcement agencies has shifted from prosecuting crime to anticipating crime. This approach emphasizes the discovery of narratives in crime-related data. However, while narratives are at the mainstay of entertainment, law, and politics, a scientific method by which narratives can be created - and subsequently be used to anticipate criminal behavior - still has to be established. In the creative industry, a narrative is generated by a scenario. A scenario describes the interactions between the characters and includes information - about behavior, goals, motivations, *modi operandi*, and resistances - that have to be overcome. Furthermore, a creative scenario is composed by a limited number of scenario components. In this book, a new and innovative scenario model is designed by which narratives in data can be detected. It introduces the ESC12 - the twelve Elementary Scenario Components - by which every conceivable narrative can be created. Moreover, the book introduces the ESC12 scenario model, a model that may support law enforcement agencies to effectively anticipate criminal behavior. The book's author, Peter A.M.G. de Kock, graduated as a filmmaker from the Film Academy of the Amsterdam School of the Arts in 1994, and has traveled all over the world as a professional photographer, cameraman, and film-director. In 2009, after receiving a Master degree in Criminal Investigation, he introduced creative scenarios to

anticipate (terrorist) attacks. The operational results of his team were thought provoking, and he was invited to demonstrate his method of operation to prominent members of Dutch Parliament and the Ministry of Security and Justice. He was then offered the opportunity to pursue the use of scenarios to anticipate crime, as an external Ph.D. student at Tilburg University. This book is the result of his study. Practical Linux Forensics Bruce Nikkel, 2021-12-21 A resource to help forensic investigators locate, analyze, and understand digital evidence found on modern Linux systems after a crime, security incident or cyber attack. Practical Linux Forensics dives into the technical details of analyzing postmortem forensic images of Linux systems which have been misused, abused, or the target of malicious attacks. It helps forensic investigators locate and analyze digital evidence found on Linux desktops, servers, and IoT devices. Throughout the book, you learn how to identify digital artifacts which may be of interest to an investigation, draw logical conclusions, and reconstruct past activity from incidents. You'll learn how Linux works from a digital forensics and investigation perspective, and how to interpret evidence from Linux environments. The techniques shown are intended to be independent of the forensic analysis platforms and tools used. Learn how to: Extract evidence from storage devices and analyze partition tables, volume managers, popular Linux filesystems (Ext4, Btrfs, and Xfs), and encryption Investigate evidence from Linux logs, including traditional syslog, the systemd journal, kernel and audit logs, and logs from daemons and applications Reconstruct the Linux startup process, from boot loaders (UEFI and Grub) and kernel initialization, to systemd unit files and targets leading up to a graphical login Perform analysis of power, temperature, and the physical environment of a Linux machine, and find evidence of sleep, hibernation, shutdowns, reboots, and crashes Examine installed software, including distro installers, package formats, and package management systems from Debian, Fedora, SUSE, Arch, and other distros Perform analysis of time and Locale settings, internationalization including language and keyboard settings, and geolocation on a Linux system Reconstruct user login sessions (shell, X11 and Wayland), desktops (Gnome, KDE, and others) and analyze keyrings, wallets, trash cans, clipboards, thumbnails, recent files and other desktop artifacts Analyze network configuration, including interfaces, addresses, network managers, DNS, wireless artifacts (Wi-Fi, Bluetooth, WWAN), VPNs (including WireGuard), firewalls, and proxy settings Identify traces of attached peripheral devices (PCI, USB, Thunderbolt, Bluetooth) including external storage, cameras, and mobiles, and reconstruct printing and scanning activity

Earth Sound Earth Signal Douglas Kahn, 2013-08-30 Earth Sound Earth Signal is a study of energies in aesthetics and the arts, from the birth of modern communications in the nineteenth century to the global transmissions of the present day. Grounded in the Aeolian sphere music that Henry David Thoreau heard blowing in telegraph lines and in the Aelectrosonic sounds of natural radio that Thomas Watson heard in telephone lines, the book moves through the histories of science, media, music, and the arts to the 1960s, when the composer Alvin Lucier worked with the natural electromagnetic sounds

present from brainwaves to outer.

Calling for Help Carolyn D. Baker, Michael Emmison, Alan Firth, 2005-01-01 Telephone helplines have become one of the most pervasive sites of expert-lay interaction in modern societies throughout the world. Yet surprisingly little is known of the in situ, language-based processes of help-seeking and help-giving behavior that occurs within them. This collection of original studies by both internationally renowned and emerging scholars seeks to improve upon this state of affairs. It does so by offering some of the first systematic investigations of naturally-occurring spoken interaction in telephone helplines. Using the methods of Conversation Analysis, each of the contributors offers a detailed investigation into the skills and competencies that callers and call-takers routinely draw upon when engaging one another within a range of helplines. Helplines in the US, the UK, Australia, Scandinavia, The Netherlands, and Ireland, dealing with the provision of healthcare, emotional support and counselling, technical assistance and consumer rights, tourism and finance, make up the studies in the volume. Collectively and individually, the research provides fascinating insight into an under-researched area of modern living and demonstrates the relevance and potential of helplines for the growing field of institutional interaction. This book will be of interest to students of communication, applied linguistics, discourse and conversation, sociology, counselling, technology and work, social psychology and anthropology.

Data Mining for Intelligence, Fraud & Criminal Detection Christopher Westphal, 2008-12-22 In 2004, the Government Accountability Office provided a report detailing approximately 200 government-based data-mining projects. While there is comfort in knowing that there are many effective systems, that comfort isn't worth much unless we can determine that these systems are being effectively and responsibly employed. Written by one of the most respected consultants in the area of data mining and security, *Data Mining for Intelligence, Fraud & Criminal Detection: Advanced Analytics & Information Sharing Technologies* reviews the tangible results produced by these systems and evaluates their effectiveness. While CSI-type shows may depict information sharing and analysis that are accomplished with the push of a button, this sort of proficiency is more fiction than reality. Going beyond a discussion of the various technologies, the author outlines the issues of information sharing and the effective interpretation of results, which are critical to any integrated homeland security effort. Organized into three main sections, the book fully examines and outlines the future of this field with an insider's perspective and a visionary's insight. Section 1 provides a fundamental understanding of the types of data that can be used in current systems. It covers approaches to analyzing data and clearly delineates how to connect the dots among different data elements. Section 2 provides real-world examples derived from actual operational systems to show how data is used, manipulated, and interpreted in domains involving human smuggling, money laundering, narcotics trafficking, and corporate fraud. Section 3 provides an overview of the many information-sharing systems, organizations, and task forces as well as data interchange formats. It also discusses optimal information-sharing and analytical architectures. Currently, there is very little published

literature that truly defines real-world systems. Although politics and other factors all play into how much one agency is willing to support the sharing of its resources, many now embrace the wisdom of that path. This book will provide those individuals with an understanding of what approaches are currently available and how they can be most effectively employed.

Cat Sense John Bradshaw, 2013-09-10 Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Unlike dogs, cats evolved as solitary hunters, and, while many have learned to live alongside humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company. In *Cat Sense*, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory, and wary of contact with their own kind, qualities that often clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners—but to continue do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments—however small—sufficiently interesting, and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats. A must-read for any cat lover, *Cat Sense* offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives—and ours.

Robert Le Rossignol Deri Sheppard, 2020-02-06 A principal aim of this first biography of Robert Le Rossignol, engineer of the Haber process, is to bring new evidence to the attention of the scientific community allowing a re-assessment of the origins of the 'Haber' process. However, the scope of the book is much wider and goes beyond the discovery of 'fixation' to account for a life distinct from Haber, one full of remarkable science, cruel circumstance, personal tragedy and amazing benevolence, the latter made possible by Haber's generous financial arrangement with Le Rossignol regarding his royalties from the BASF.
