A Sourcebook of Nasca Ceramic Iconography Donald A. Proulx, 2009-08 For almost eight hundred years (100 BC-AD 650) Nasca artists modeled and painted the plants, animals, birds, and fish of their homeland on Peru's south coast as well as numerous abstract anthropomorphic creatures whose form and meaning are sometimes incomprehensible today. In this first book-length treatment of Nasca ceramic iconography to appear in English, drawing upon an archive of more than eight thousand Nasca vessels from over 150 public and private collections, Donald Proulx systematically describes the major artistic motifs of this stunning polychrome pottery, interprets the major themes displayed on this pottery, and then uses these descriptions and his stimulating interpretations to analyze Nasca society. After beginning with an overview of Nasca culture and an explanation of the style and chronology of Nasca pottery, Proulx moves to the heart of his book: a detailed classification and description of the entire range of supernatural and secular themes in Nasca iconography along with a fresh and distinctive interpretation of these themes. Linking the pots and their iconography to the archaeologically known Nasca society, he ends with a thorough and accessible examination of this ancient culture viewed through the lens of ceramic iconography. Although these static images can never be fully understood, by animating their themes and meanings Proulx reconstructs the lifeways of this complex society.

The Dream Seekers Lee Irwin, 1996-09-01 In *The Dream Seekers*, Lee Irwin demonstrates the central importance of visionary dreams as sources of empowerment and innovation in Plains Indian religion. Irwin draws on 350 visionary dreams from published and unpublished sources that span 150 years to describe the shared features of cosmology for twenty-three

groups of Plains Indians. This comprehensive work is not a recital but an understandable exploration of the religious world of Plains Indians. The different means of acquiring visions that are described include the spontaneous vision experience common among Plains Indian women and means such as stress, illness, social conflict, and mourning used by both men and women to obtain visions. Irwin describes the various stages of the structured male vision quest as well as the central issues of unsuccessful or abandoned quests, threshold experiences during a vision, and the means by which religious empowerment is attained and transferred.

The Art of Cloth in Mughal India Sylvia Houghteling, 2022-03-29
When a rich man in seventeenth-century South Asia enjoyed a peaceful night's sleep, he imagined himself enveloped in a velvet sleep. In the poetic imagination of the time, the fine dew of early evening was like a thin cotton cloth from Bengal, and woolen shawls of downy pashmina sent by the Mughal emperors to their trusted noblemen approximated the soft hand of the ruler on the vassal's shoulder. Textiles in seventeenth-century South Asia represented more than cloth to their makers and users. They simulated sensory experience, from natural, environmental conditions to intimate, personal touch. *The Art of Cloth in Mughal India* is the first art historical account of South Asian textiles from the early modern era. Author Sylvia Houghteling resurrects a truth that seventeenth-century world citizens knew, but which has been forgotten in the modern era: South Asian cloth ranked among the highest forms of art in the global hierarchy of luxury goods, and had a major impact on culture and communication. While studies abound in economic history about the global trade in Indian textiles that flourished from the seventeenth to the nineteenth centuries, they rarely engage with the material itself and are less concerned with the artistic and much less the literary and social-significance of the taste for cloth. This book is richly illustrated with images of textiles, garments, and paintings that are held in little-known collections and have rarely, if ever, been published. Rather than rely solely on records of European trading companies, Houghteling draws upon poetry in local languages and integrates archival research from unpublished royal

Indian inventories to tell a new history of this material culture, one with a far more balanced view of its manufacture and use, as well as its purchase and trade--

Turn Down the Heat A Report for the World Bank by the Potsdam Institute for Climate Impact Research and Analytics., 2013-06-19 This report focuses on the risks of climate change to development in Sub-Saharan Africa, South East Asia and South Asia. Building on the 2012 report, Turn Down the Heat: Why a 4°C Warmer World Must be Avoided, this new

scientific analysis examines the likely impacts of present day, 2°C and 4°C warming on agricultural production, water resources, and coastal vulnerability. It finds many significant climate and development impacts are already being felt in some regions, and that as warming increases from present day (0.8°C) to 2°C and 4°C, multiple threats of increasing extreme heat waves, sea-level rise, more severe storms, droughts and floods are expected to have further severe negative implications for the poorest and most vulnerable. The report finds that agricultural yields will be affected across the three regions, with repercussions for food security, economic growth, and poverty reduction. In addition, urban areas have been identified as new clusters of vulnerability with urban dwellers, particularly the urban poor, facing significant vulnerability to climate change. In Sub-Saharan Africa, under 3°C global warming, savannas are projected to decrease from their current levels to approximately one-seventh of total land area and threaten pastoral livelihoods. Under 4°C warming, total hyper-arid and arid areas are projected to expand by 10 percent. In South East Asia, under 2°C warming, heat extremes that are virtually absent today would cover nearly 60-70 percent of total land area in northern-hemisphere summer, adversely impacting ecosystems. Under 4°C warming, rural populations would face mounting pressures from sea-level rise, increased tropical cyclone intensity, storm surges, saltwater intrusions, and loss of marine ecosystem services. In South Asia, the potential sudden onset of disturbances to the monsoon system and rising peak temperatures would put water and food resources at severe risk. Well before 2°C warming occurs, substantial reductions in the frequency of low snow years is projected to cause substantial reductions in dry season flow, threatening agriculture. Many of the worst climate impacts could still be avoided by holding warming below 2°C, but the window for action is closing rapidly. Urgent action is also needed to build resilience to a rapidly warming world that will pose significant risks to agriculture, water resources, coastal infrastructure, and human health.

Social Dimensions of Climate Change Robin Mearns, Andrew Norton, 2009-12-02 While major strides have been made in the scientific understanding of climate change, much less understood is how these dynamics in the physical environment interact with socioeconomic systems. This book brings together the latest knowledge on the consequences of climate change for society and how best to address them.

Renewable Energy Sources and Climate Change Mitigation Ottmar Edenhofer, Ramón Pichs Madruga, 2012 This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of

technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.
