Transforming Trajectories for Women of Color in Tech National Academies of Sciences, Engineering, and Medicine, National Academies Of Sciences Engineeri, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Addressing the Underrepresentation of Women of Color in Tech, 2022-09-09 Demand for tech professionals is expected to increase substantially over the next decade, and increasing the number of women of color in tech will be critical to building and maintaining a competitive workforce. Despite years of efforts to increase the diversity of the tech workforce, women of color have remained underrepresented, and the numbers of some groups of women of color have even declined. Even in cases where some groups of women of color may have higher levels of representation, data show that they still face significant systemic challenges in advancing to positions of leadership. Research evidence suggests that structural and social barriers in tech education, the tech workforce, and in venture capital investment disproportionately and negatively affect women of color. Transforming Trajectories for Women of Color in Tech uses current research as well as information obtained through four public information-gathering workshops to provide recommendations to a broad set of stakeholders within the tech ecosystem for increasing recruitment, retention, and advancement of women of color. This report identifies gaps in existing research that obscure the nature of challenges faced by women of color in tech, addresses systemic issues that negatively affect outcomes for women of color in tech, and provides guidance for transforming existing systems and implementing evidence-based policies and practices to increase the success of women of color in tech.

Women of Color In STEM Beverly Irby, Nahed Abdelrahman, Barbara Polnick, Julia Ballenger, 2021-03-01 Though there has been a rapid increase of women's representation in law and business, their representation in STEM fields has not been matched. Researchers have revealed that there are several environmental and social barriers including stereotypes, gender bias, and the climate of science and engineering departments in colleges and universities that continue to block women's progress in STEM. In this book, the authors address the issues that encounter women of color in STEM in higher education.

The Woman of Colour Lyndon J. Dominique, 2007-10-24 The Woman of Colour is a unique literary account of a black heiress' life immediately after the abolition of the British slave trade. Olivia Fairfield, the biracial heroine and orphaned daughter of a slaveholder, must travel from Jamaica to England, and as a condition of her father's will either marry her Caucasian first cousin or become dependent on his mercenary elder brother and sister-in-law. As Olivia decides between

these two conflicting possibilities, her letters recount her impressions of Britain and its inhabitants as only a black woman could record them. She gives scathing descriptions of London, Bristol, and the British, as well as progressive critiques of race, racism, and slavery. The narrative follows her life from the heights of her arranged marriage to its swift descent into annulment and destitution, only to culminate in her resurrection as a self-proclaimed “widow” who flouts the conventional marriage plot. The appendices, which include contemporary reviews of the novel, historical documents on race and inheritance in Jamaica, and examples of other women of colour in early British prose fiction, will further inspire readers to rethink issues of race, gender, class, and empire from an African woman’s perspective.

Women, Race, & Class Angela Y. Davis, 2011-06-29 From one of our most important scholars and civil rights activist icon, a powerful study of the women’s liberation movement and the tangled knot of oppression facing Black women. “Angela Davis is herself a woman of undeniable courage. She should be heard.”—The New York Times Angela Davis provides a powerful history of the social and political influence of whiteness and elitism in feminism, from abolitionist days to the present, and demonstrates how the racist and classist biases of its leaders inevitably hampered any collective ambitions. While Black women were aided by some activists like Sarah and Angelina Grimke and the suffrage cause found unwavering support in Frederick Douglass, many women played on the fears of white supremacists for political gain rather than take an intersectional approach to liberation. Here, Davis not only contextualizes the legacy and pitfalls of civil and women’s rights activists, but also discusses Communist women, the murder of Emmitt Till, and Margaret Sanger’s racism. Davis shows readers how the inequalities between Black and white women influence the contemporary issues of rape, reproductive freedom, housework and child care in this bold and indispensable work.

Camouflage Sarah Bargiela, 2019-03-21 Autism in women and girls is still not widely understood, and is often misrepresented or even overlooked. This graphic novel offers an engaging and accessible insight into the lives and minds of autistic women, using real-life case studies. The charming illustrations lead readers on a visual journey of how women on the spectrum experience everyday life, from metaphors and masking in social situations, to friendships and relationships and the role of special interests. Fun, sensitive and informative, this is a fantastic resource for anyone who wishes to understand how gender affects autism, and how to create safer supportive and more accessible environments for women on the spectrum.

Women of Color Nancy Reiko Kato,2003 Cultural Writing. African American studies. Latin American studies. Asian American studies. Women of color have survived over 500 years of repression in the Americas. And it has been our search for dignity against the greatest odds that has forged in us the anger, determination, and political consciousness that compel us to step forward to challenge this bankrupt and dying system.

The Advocate ,2001-08-14 The Advocate is a lesbian, gay, bisexual, transgender (LGBT) monthly newsmagazine. Established in 1967, it is the oldest continuing LGBT publication in the United States.

Unequal Freedom Evelyn Nakano GLENN,2009-06-30 The inequalities that persist in America have deep historical roots. Evelyn Nakano Glenn untangles this complex history in a unique comparative regional study from the end of Reconstruction to the eve of World War II. During this era the country experienced enormous social and economic changes with the abolition of slavery, rapid territorial expansion, and massive immigration, and struggled over the meaning of free labor and the essence of citizenship as people who previously had been excluded sought the promise of economic freedom and full political rights. After a lucid overview of the concepts of the free worker and the independent citizen at the national level, Glenn vividly details how race and gender issues framed the struggle over labor and citizenship rights at the local level between blacks and whites in the South, Mexicans and Anglos in the Southwest, and Asians and haoles (the white planter class) in Hawaii. She illuminates the complex interplay of local and national forces in American society and provides a dynamic view of how labor and citizenship were defined, enforced, and contested in a formative era for white-nonwhite relations in America.

Ink & Paint Mindy Johnson,2017-09-05 From the earliest origins of animated imagery, the colorful link between paper and screen was created by legions of female artists working on the slick surface of celluloid sheets. With calligraphic precision and Rembrandtesque mastery, these women painstakingly brought pencil drawings to vibrant, dimensional life. Yet perhaps as a reflection of the transparent canvas they created on, the contributions and history of these animation artists have remained virtually invisible and largely undocumented, until now. Walt Disney's pioneering efforts in animation transformed novelty cartoons into visual masterpieces, establishing many firsts for women within the entertainment industry

along the way. Focusing on talent, Disney sought female story specialists and concept artists to expand the scope and sensibility of his storytelling. Upon establishing the first animation-training program for women, ink pens were traded for pencils as ladies made their way into the male-laden halls of animation. World War II further opened roles traditionally held by men, and women quickly progressed into virtually every discipline within animation production. Disney's later development of the Xerox process and eventual digital evolution once again placed women at the forefront of technological advancements applied to animated storytelling. In her latest landmark book, *Ink & Paint: The Women of Walt Disney's Animation*, author Mindy Johnson pulls back the celluloid curtain on the nearly vanished world of ink pens, paintbrushes, pigments, and tea. From the earliest black-and-white Alice Comedies to the advent of CAPS and digital animation, meet the pioneering women who brought handrendered animated stories to vibrant, multicolored life at Walt Disney Studios and beyond. Extensively researched with the full support of the entire Walt Disney Studios archival resources, plus a multitude of private collections, firsthand accounts, newly discovered materials, and production documentation, as well as never-before-seen photography and artwork, this essential volume redefines the collective history of animation.

Barriers and Opportunities for 2-Year and 4-Year STEM Degrees National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Policy and Global Affairs, Board on Higher Education and Workforce, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Barriers and Opportunities in Completing 2-Year and 4-Year STEM Degrees, 2016-05-18 Nearly 40 percent of the students entering 2- and 4-year postsecondary institutions indicated their intention to major in science, technology, engineering, and mathematics (STEM) in 2012. But the barriers to students realizing their ambitions are reflected in the fact that about half of those with the intention to earn a STEM bachelor's degree and more than two-thirds intending to earn a STEM associate's degree fail to earn these degrees 4 to 6 years after their initial enrollment. Many of those who do obtain a degree take longer than the advertised length of the programs, thus raising the cost of their education. Are the STEM educational pathways any less efficient than for other fields of study? How might the losses be stemmed and greater efficiencies realized? These questions and others are at the heart of this study. *Barriers and Opportunities for 2-Year and 4-Year STEM Degrees* reviews research on the roles that people, processes, and institutions play in 2- and 4-year STEM degree production. This study pays special attention to the factors that influence students' decisions to enter, stay in, or leave STEM majors—quality of instruction, grading policies, course sequences, undergraduate learning environments, student supports, co-curricular activities, students' general academic preparedness and competence in science, family background, and governmental and institutional policies that

affect STEM educational pathways. Because many students do not take the traditional 4-year path to a STEM undergraduate degree, *Barriers and Opportunities* describes several other common pathways and also reviews what happens to those who do not complete the journey to a degree. This book describes the major changes in student demographics; how students, view, value, and utilize programs of higher education; and how institutions can adapt to support successful student outcomes. In doing so, *Barriers and Opportunities* questions whether definitions and characteristics of what constitutes success in STEM should change. As this book explores these issues, it identifies where further research is needed to build a system that works for all students who aspire to STEM degrees. The conclusions of this report lay out the steps that faculty, STEM departments, colleges and universities, professional societies, and others can take to improve STEM education for all students interested in a STEM degree.

The Status of Women in Iowa Amy B. Caiazza, 2002 *The Status of Women in Alabama*, sponsored by the Institute for Women's Policy Research (IWPR) in Washington D.C., provides an overview of where women in Alabama stand economically and how the state stacks up nationally regarding political participation, employment and earnings, social and economic independence and health, among other indicators. The benchmark study was released today at a press conference on the University of Alabama at Birmingham (UAB) campus by members of the Alabama Advisory Committee for the Status of Women in Alabama report. The report highlights what's promising as well as what's most disappointing for women in the state.

Rewriting the Rules of the American Economy: An Agenda for Growth and Shared Prosperity Joseph E. Stiglitz, 2015-11-02 It's time to rewrite the rules—to curb the runaway flow of wealth to the top one percent, to restore security and opportunity for the middle class, and to foster stronger growth rooted in broadly shared prosperity. Inequality is a choice. The United States bills itself as the land of opportunity, a place where anyone can achieve success and a better life through hard work and determination. But the facts tell a different story—the U.S. today lags behind most other developed nations in measures of inequality and economic mobility. For decades, wages have stagnated for the majority of workers while economic gains have disproportionately gone to the top one percent. Education, housing, and health care—essential ingredients for individual success—are growing ever more expensive. Deeply rooted structural discrimination continues to hold down women and people of color, and more than one-fifth of all American children now live in poverty. These trends are on track to become even worse in the future. Some economists claim that today's bleak conditions are inevitable consequences of market outcomes, globalization, and technological progress. If we want greater equality, they argue, we have to sacrifice growth. This is simply not true. American inequality is the result of misguided structural rules that actually constrict economic growth. We have stripped away worker protections and family support systems, created a tax system that rewards short-term gains over long-term investment, offered a de facto public safety net to too-big-to-fail financial

institutions, and chosen monetary and fiscal policies that promote wealth over full employment.

Promising Practices for Addressing the Underrepresentation of Women in Science, Engineering, and Medicine National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Committee on Women in Science, Engineering, and Medicine, Committee on Increasing the Number of Women in Science, Technology, Engineering, Mathematics, and Medicine (STEMM), 2020-04-19 Careers in science, engineering, and medicine offer opportunities to advance knowledge, contribute to the well-being of communities, and support the security, prosperity, and health of the United States. But many women do not pursue or persist in these careers, or advance to leadership positions - not because they lack the talent or aspirations, but because they face barriers, including: implicit and explicit bias; sexual harassment; unequal access to funding and resources; pay inequity; higher teaching and advising loads; and fewer speaking invitations, among others. There are consequences from this underrepresentation of women for the nation as well: a labor shortage in many science, engineering, and medical professions that cannot be filled unless institutions and organizations recruit from a broad and diverse talent pool; lost opportunities for innovation and economic gain; and lost talent as a result of discrimination, unconscious bias, and sexual harassment. *Promising Practices for Addressing the Underrepresentation of Women in Science, Engineering, and Medicine* reviews and synthesizes existing research on policies, practices, programs, and other interventions for improving the recruitment, retention, and sustained advancement into leadership roles of women in these disciplines. This report makes actionable recommendations to leverage change and drive swift, coordinated improvements to the systems of education, research, and employment in order to improve both the representation and leadership of women.

Gender Equity in STEM in Higher Education Hyun Kyoung Ro, Frank Fernandez, Elizabeth J. Ramon, 2021-07-11 This timely volume brings together a range of international scholars to analyse cultural, political, and individual factors which contribute to the continued global issue of female underrepresentation in STEM study and careers. Offering a comparative approach to examining gender equity in STEM fields across countries including the UK, Germany, the United States, Hong Kong, Taiwan, South Africa, and China, the volume provides a thematic breakdown of institutional trends and national policies that have successfully improved gender equity in STEM at institutions of higher education. Offering case studies that demonstrate how policies interact with changing social and cultural norms, and impact women's choices and experiences in relation to the uptake and continuation of STEM study at the undergraduate level, the volume highlights new directions for research and policy to promote gender equity in STEM at school, university, and career levels. Contributing to the United Nations' (UN) 2030 Agenda for Sustainable Development, this text will benefit researchers, academics, and educators with an interest in science education, higher education, and gender equity in STEM fields. The text will also support further discussion and reflection around multicultural education, educational policy and politics, and the sociology of education more broadly.
