**Visual Voyages** Daniela Bleichmar, 2017-01-01 An unprecedented visual exploration of the intertwined histories of art and science, of the old world and the new From the voyages of Christopher Columbus to those of Alexander von Humboldt and Charles Darwin, the depiction of the natural world played a central role in shaping how people on both sides of the Atlantic understood and imaged the region we now know as Latin America. Nature provided incentives for exploration, commodities for trade, specimens for scientific investigation, and manifestations of divine forces. It also yielded a rich trove of representations, created both by natives to the region and visitors, which are the subject of this lushly illustrated book. Author Daniela Bleichmar shows that these images were not only works of art but also instruments for the production of knowledge, with scientific, social, and political repercussions. Early depictions of Latin American nature introduced European audiences to native medicines and religious practices. By the 17th century, revelatory accounts of tobacco, chocolate, and cochineal reshaped science, trade, and empire around the globe. In the 18th and 19th centuries, collections and scientific expeditions produced both patriotic and imperial visions of Latin America. Through an interdisciplinary examination of more than 150 maps, illustrated manuscripts, still lifes, and landscape paintings spanning four hundred years, Visual Voyages establishes Latin America as a critical site for scientific and artistic exploration, affirming that region's transformation and the transformation of Europe as vitally connected histories.

*Five Equations That Changed the World* Dr. Michael Guillen, 2012-06-05 A Publishers Weekly best book of 1995! Dr. Michael Guillen, known to millions as the science editor of ABC's Good Morning America, tells the fascinating stories behind five mathematical equations. As a regular contributor to daytime's most popular morning news show and an instructor at

Harvard University, Dr. Michael Guillen has earned the respect of millions as a clear and entertaining guide to the exhilarating world of science and mathematics. Now Dr. Guillen unravels the equations that have led to the inventions and events that characterize the modern world, one of which -- Albert Einstein's famous energy equation,  $E=mc^2$  -- enabled the creation of the nuclear bomb. Also revealed are the mathematical foundations for the moon landing, airplane travel, the electric generator -- and even life itself. Praised by Publishers Weekly as a wholly accessible, beautifully written exploration of the potent mathematical imagination, and named a Best Nonfiction Book of 1995, the stories behind *The Five Equations That Changed the World*, as told by Dr. Guillen, are not only chronicles of science, but also gripping dramas of jealousy, fame, war, and discovery.

*American Secret Projects 1* Tony Buttler, Alan Griffith (Military aircraft researcher), 2016-04-07 Featuring the obscure, the unusual, the unbuilt and the unseen. The secret is out - Secret Projects is back. This is a new title in this highly acclaimed series, this time looking at concepts developed by the US aircraft industry in the years immediately prior to and during World War 2. This book includes and describes the major fighter and bomber proposals from the American aircraft industry which embrace various fighter and interceptor concepts, medium, heavy and intercontinental bombers, attack aircraft and anti-submarine aircraft, both for the USAF and US Navy. Particular emphasis is placed on 'Circular Proposals' - a system of submitting designs against requirements circulated around the industry by the Army Air Force in the 1930s and early 1940s. The illustrations show drawings and photographs of unbuilt designs merged with the history and photographs of real aeroplanes. Very little has been published previously about American projects from this time period and much of the material will not have been seen widely before. It will therefore be fascinating reading for all lovers of the previously highly successful 'Secret Projects' series and aviation historians.
