Customization 4.0 Stephan Hankammer,Kjeld Nielsen,Frank T. Piller,Günther Schuh,Ning Wang,2018-06-20 This proceedings volume presents the latest research from the worldwide mass customization & personalization (MCP) community bringing together new thoughts and results from various disciplines within the field. The chapters are based on papers from the MCPC 2017. The book showcases research and practice from authors that see MCP as an opportunity to extend or even revolutionize current business models. The current trends of Industrie 4.0, digital manufacturing, and the rise of smart products allow for a fresh perspective on MCP: Customization 4.0. The book places a new set of values in the centre of the debate: a world with finite resources, global population growth, and exacerbating climate change needs smart thinking to engage the most effective capabilities and resources. It discusses how Customization 4.0 fosters sustainable development and creates shared value for companies, customers, consumers, and the society as a whole. The chapters of this book are contributed by a wide range of specialists, offering cutting-edge research, as well as insightful advances in industrial practice in key areas. The MCPC 2017 has a strong focus on real life MCP applications, and this proceedings volume reflects this. MCP strategies aim to profit from the fact that people are different. Their objective is to turn customer heterogeneities into opportunities, hence addressing “long tail” business models. The objective of MCP is to provide goods and services that best serve individual customers’ needs with near mass production efficiency. This proceedings volume highlights the interdisciplinary work of thought leaders, technology developers, and researchers with corporate entrepreneurs putting these strategies into practice. The Channel Advantage Tim Furey, Lawrence Friedman, 2012-05-23 'The Channel Advantage' deals with one topic, and deals with it comprehensively and rigorously: how to construct a sales channel system that will yield world-class sales performance and durable competitive advantage. This book helps readers move decisively away from the notion of channel strategy as a sideline to the core business. Building a channel advantage is the core business today, and this is an essential text and reference for all serious marketing and sales professionals and students. Channel innovation is separating market winners from market losers, and not just in leading-edge technology industries. In a business world where industry players are selling practically the same products at essentially the same prices at about the same cost, the only real source of

sustainable competitive advantage is the sales channel: how you sell, not what you sell. Selling becomes a question of how to connect products with customers via the best mix of sales channels: the sales force, value-added partners, distributors, retail stores, telemarketing, and the Internet. In short, how companies sell has become as important as what they sell. 'The Channel Advantage' explains how leading companies develop strategies that integrate e-commerce, telemarketing, sales forces, and distributors to achieve superior sales performance and sustainable competitive advantage. Timothy R. Furey is chairman, CEO and co-founder of Oxford Associates, a privately held consulting firm specializing in sales and market strategy, e-commerce channel integration and market research, based in Bethesda, Maryland. Oxford has achieved an annual growth of more than forty percent since its creation in 1991 and was named one of America's 500 fastest growing private companies by Inc. Magazine in 1997. Furey, a pioneer in the use of hybrid sales and marketing strategies for blue chip companies, works extensively with senior management leadership teams to develop and implement go-to-market growth strategies. His clients include IBM, American Express, Marriott, Xerox, Fidelity Investments, Bristol-Myers Squibb, and Johnson & Johnson. Under his leadership, Oxford Associates has developed leading-edge strategies, business processes and systems for deploying and integrating multi-channel sales and marketing systems. They work to align products with the right customers via an appropriate mix of the Internet, telesales, distributors, value-added partners, and traditional sales force channels. Mr. Furey is the co-author of THE CHANNEL ADVANTAGE (Butterworth-Heinemann, August 31, 1999), which is endorsed by the CEOs of America Online, Lotus Development, Ocean Spray, and Xerox. Mr. Furey also serves on the Board of Directors of Alpha Industries (Nasdaq:AHAA), a leading semiconductor manufacturer for wireless telephone applications. Previously, Mr. Furey worked with Boston Consulting Group, Strategic Planning Associates, Kaiser Associates and the Marketing Science Institute. He earned a BA in Economics, cum laude, from Harvard University and an MBA from the Harvard Business School. Lawrence G. Friedman is an internationally recognized channel strategy consultant whose clients have included companies such as Lotus, AT&T, Canon, Compaq Digital Equipment, Microsoft and Bell Atlantic. He also held executive level positions at Andersen Consulting and Huthwaite, Inc., the sales research firm that developed the SPIN Selling Model. In 1996, Friedman, with Neil Rackham and Richard Ruff, co-authored the best-seller, GETTING PARTNERING RIGHT (McGraw-Hill). He is on the review board of the Journal of Selling and Major Account Management, which published his article, Multiple Channel Sales Strategy, in the April, 1999 issue. His firm, The Sales Strategy Institute, works with clients to identify and evaluate new go-to-market opportunities and conducts in-depth channel strategy workshops and seminars. Mr. Friedman is a frequent guest speaker and lecturer on sales and channel strategy throughout the United States, Europe and Asia. Mr. Friedman earned an MA from the University of Chicago.

Health Care Finance Steven R. Eastaugh, 1992-06-30 This book is a thorough, balanced, and insightful study of what is happening and what should be happening in health care financing. Americans want unlimited access to the best care at

affordable prices. Fiscal pressures in American health care point in all different directions, like a pile of jackstraws. This important book analyzes how new payment incentives stimulate planned competition or reregulation; and the far-reaching impact these changes have on hospitals, physicians, long-term care facilities, HMOs, public health clinics, and multihospital systems. Tools for survival include better financial planning, productivity improvement, better scheduling systems, and total quality management. Steven R. Eastaugh begins his book with a general overview of cost management, accounting, product-line selection, and new payment incentives. Part II provides an in-depth survey of fiscal trends in long-term care, managed care, HMOs, and PPOs. Part III analyzes five basic strategies that a provider may consider; with special focus on market analysis, diversification, and pricing. The next part reviews physician payment options, the new Medicare 1992 payment systems for hospitals and physicians, and cost analysis of hospital patient care, research, and education. Part V considers productivity enhancement methods, incentives to assist productivity programs, and the Deming method of total quality management. Part VI focuses on investment, financing, and capital structure decisions in health care institutions and also in large multifacility systems. The last part summarizes major strategies for success in the 1990s, future policy alternatives, and suggests a number of alternative roads to universal entitlement and national health care reform. As Eastaugh suggests in this book, Our health system faces . . . immense opportunity and danger in a reformation on four fronts: access, efficiency, effectiveness, and quality of life. The challenge for providers and managers during this period of unparalleled opportunity is to win a clear victory on all four fronts, and not erode either access or quality in the name of efficiency. The range of coverage in Health Care Finance is extremely wide and detailed--making it essential and useful reading for health care professionals and students alike.

The Science of Footwear Ravindra S. Goonetilleke, 2012-11-06 Although we now have sophisticated algorithms and techniques for determining the shapes and sizes and for matching the fit between shoes and feet, few, if any, of the books currently available cover these new technologies until now. Bringing together high-quality and state-of-the-art contributions from designers, biomechanists, ergonomists, engineers, podiatrists, and scientists from industry and academia, The Science of Footwear provides an in-depth understanding of the technology and techniques involved in the design and development of a popular and demanding consumer product. personalization and mass customization, areas that are not well-understood. This book explores these different concepts in a coherent way, drawing on differing views that give a holistic view of the science behind footwear. Collating information from different disciplines, the book provides the tools to develop the next generation of footwear.

Textiles, Identity and Innovation: Design the Future Gianni Montagna, Cristina Carvalho, 2018-10-03 D_TEX presents itself as a starting point at a crossroads of ideas and debates around the complex universe of Textile Design in all its forms, manifestations and dimensions. The textile universe, allied to mankind since its beginnings, is increasingly far from being an area of exhausted possibilities, each moment proposing important innovations that need a presentation, discussion and maturation space that is comprehensive and above all inter- and transdisciplinary. Presently, the disciplinary areas where the textile area is present are increasing and important, such as fashion, home textiles, technical clothing and accessories, but also construction and health, among others, and can provide new possibilities and different disciplinary areas and allowing the production of new knowledge. D_TEX proposes to join the thinking of design, with technologies, tradition, techniques, and related areas, in a single space where ideas are combined with the technique and with the projectual and research capacity, thus providing for the creation of concepts, opinions, associations of ideas, links and connections that allow the conception of ideas, products and services. The interdisciplinary nature of design is a reality that fully reaches the textile material in its essence and its practical application, through the synergy and contamination by the different interventions that make up the multidisciplinary teams of research. The generic theme of D_TEX Textile Design Conference 2017, held at Lisbon School of Architecture of the University of Lisbon, Portugal on November 2-4, 2017, is Design the Future, starting from the crossroads of ideas and debates, a new starting point for the exploration of textile materials, their identities and innovations in all their dimensions.
